EPS Adobe's EPS is the standard graphic exchange format. It's the most common format for creating artwork and the preferred one for interactive publishing when a vector format is used. However, it has its limitations. For one, the standard EPS format is rarely used for print. Even for e-mail, the format is not commonly used because of its lack of compression.

Latest Video Monday, August 12, 2013 Can you guess the Final Destination? Given the movie cliché of the final reel, in which the bodies pile up, there are a surprising number of people who believe they know the Final Destination already. Odds are it's not the Final Destination, but even so, it's pretty cool to know what it's all about--and what the films in the series have in common. Of course, "Final" and "Destination" are pretty close to each other in the movie world. The man who claims he knows the actual destination is Final Destination 5's Andrew Britton. The Final Destination films are based on the idea that when a series of events leads to tragedy, a single person has to die, creating a deus ex machina of fate. It's basically that twist that, if everything goes right, ends up with one person surviving and thus many others who would have died anyway would be saved. From the beginning, the films followed the concept that people could control their fate, either in the movies themselves or by watching them to see what would happen to them. In one movie, there are no survivors, and even those who do survive aren't the same people they were before. As a result, there are still surprises in any new Final Destination film. But they all follow the same pattern: Someone in the cast dies. The one person who survives is always surprisingly different from the one who died. The survivor has a purpose and a mission, or at least he or she has a reason to think that no matter what happens they'll survive, even if it means death for everyone else. No less than three Final Destination films have been made in the last two years. This fall will see the third, Final Destination: 3D. And while those films all followed the same formula, they do have their own differences. In the first film, the victims were all American teens who went to a high school dance and decided to dance to the end of their lives. The second had a Canadian bride who eloped before her wedding. In the first two films there were no survivors. That's changed in this third film, where the twist is that someone who has to die also survives, and the scriptwriters and editors make sure that the survivor in the third movie is not the same person. Another difference is that this third film will actually turn out to be the last Final Destination. Britton tells E!
